

NAME: SANIA SOHAIL
INTERN AT: Petalnex Pvt. Ltd.
INTERNSHIP DOMAIN: AI AUTOMATION

Manual Business Processes Identified for Automation

Process Name	Current Manual Process	Problem	Trigger	Input	Processing Required	Expected Output	Benefits
CV Shortlisting	HR staff go through each resume by hand	Time-intensive	A CV is uploaded	Resume in PDF form	Pull out relevant skills and match them against the job criteria	A shortlist of qualified candidates	Cuts down on time spent
Leave Application	Employee sends an email to their manager	Emails can be missed or overlooked	A leave form is submitted	Employee information	Check remaining leave balance and route an approval request	Approval or rejection notice	Speeds up the process
Customer Query Handling	Staff go through every incoming email individually	Responses are delayed	A new support email arrives	Customer's message	Sort the query by category and set its priority level	A support ticket is opened	Support is delivered faster
Invoice Creation	Accountant builds each invoice by hand	Consumes a lot of time	A new order comes in	Customer and order information	Produce an invoice in PDF format	Invoice sent out by email	Reduces mistakes
Daily Sales Summary	Manager compiles the report manually	Repetitive task	End of the business day	Sales figures	Add up totals and put together the report	A daily sales summary document	Cuts down on time spent

README

AI-Automation-Internship

Welcome to my AI Automation Internship repository.

This repository is created to document my internship journey from day one. It will include my assignments, projects, notes, and the skills I develop while learning AI automation and workflow technologies.

About

This repository is dedicated to my AI Automation Internship. It serves as a collection of my internship tasks, automation workflows, API practice, project documentation, and other learning resources developed during the program

API Testing for O...

/onboard-user Help me test an API I'm working with.

To get you testing quickly, I can set up a request, send it, and add basic checks for the response.

What I need from you is just one of these:

- the API endpoint URL, or
- a cURL command, or
- a short description like "test my POST /users endpoint with this JSON body ..."

If you already have a request open, I can inspect it and build tests on top of it. If not, send the endpoint details and I'll set everything up.

Describe what you need. Press @ for context, / for Skills.
