Day 7 — API Fundamentals & Postman

Objective

To understand how REST APIs work using Postman by sending HTTP requests, inspecting JSON responses, and understanding request/response details and HTTP status codes.

API Used

API Name: JSONPlaceholder

Base URL: <https://jsonplaceholder.typicode.com>

Request Details

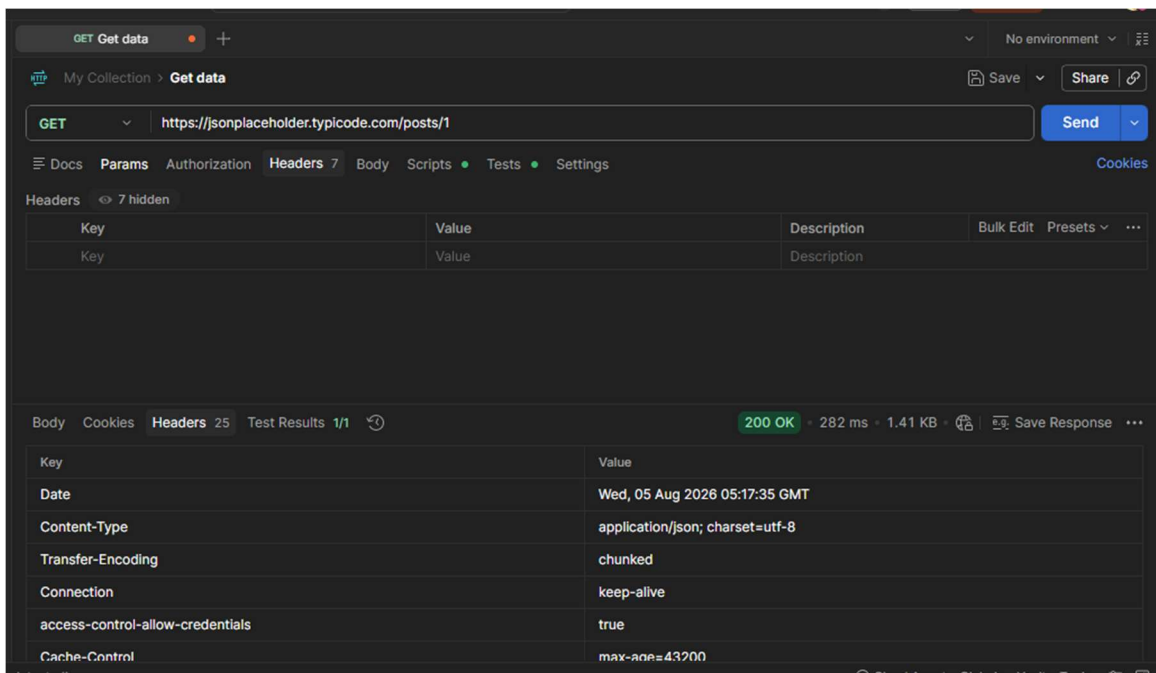

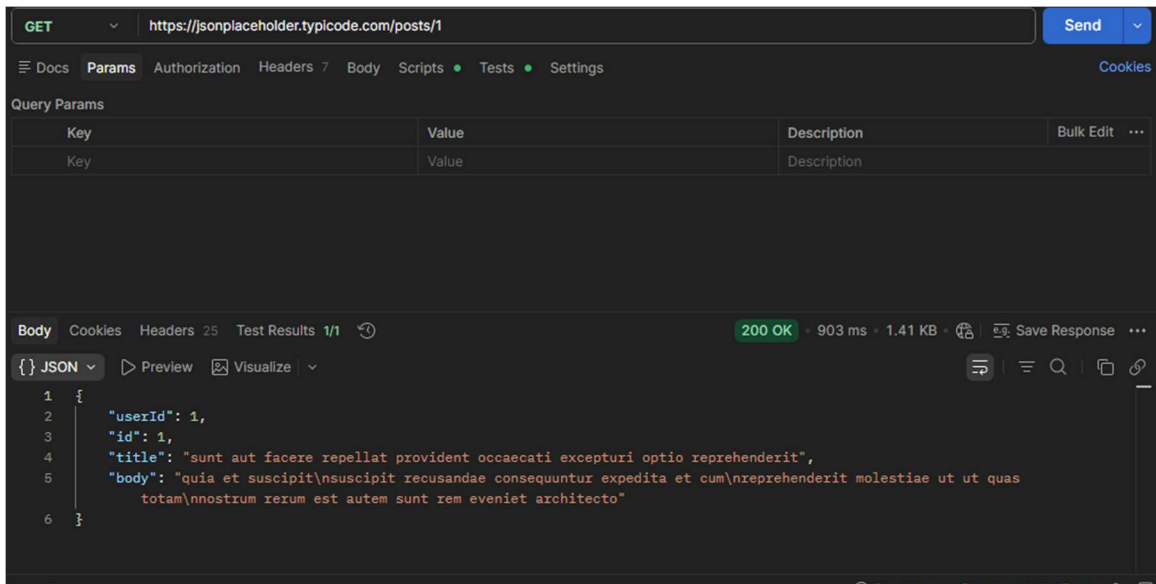

Request URL:

<https://jsonplaceholder.typicode.com/posts/1>

HTTP Method: GET

Headers Observed:

- Date
- Content-Type
- Transfer-Encoding
- Connection
- Cache-Control

JSON Response

Example Response:

```
{
  "userId": 1,
  "id": 1,
  "title": "...",
  "body": "..."
}
```

Field	Type	Description
userId	Number	User ID
id	Number	Post ID
title	String	Title
body	String	Content

The screenshot shows a REST client interface with a successful response. The status bar at the top indicates '200 OK' with a response time of 903 ms and a size of 1.41 KB. The response body is displayed in JSON format:

```

1 {
2   "userId": 1,
3   "id": 1,
4   "title": "sunt aut facere repellat provident occaecati excepturi optio reprehenderit",
5   "body": "quia et suscipit\nsuscipit recusandae consequuntur expedita et cum\nreprehenderit molestiae ut ut quas totam\nnostrum rerum est autem sunt rem eveniet architecto"
6 }

```

userId	1
id	1
title	sunt aut facere repellat provident occaecati excepturi optio reprehenderit
body	quia et suscipit suscipit recusandae consequuntur expedita et cum reprehenderit molestiae ut ut quas totam nostrum rerum est autem sunt rem eveniet architecto

Error Request

Request URL:

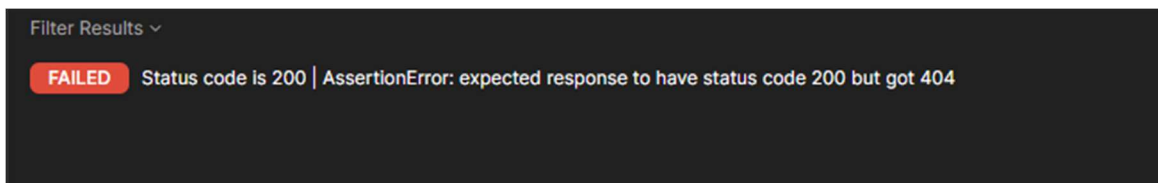

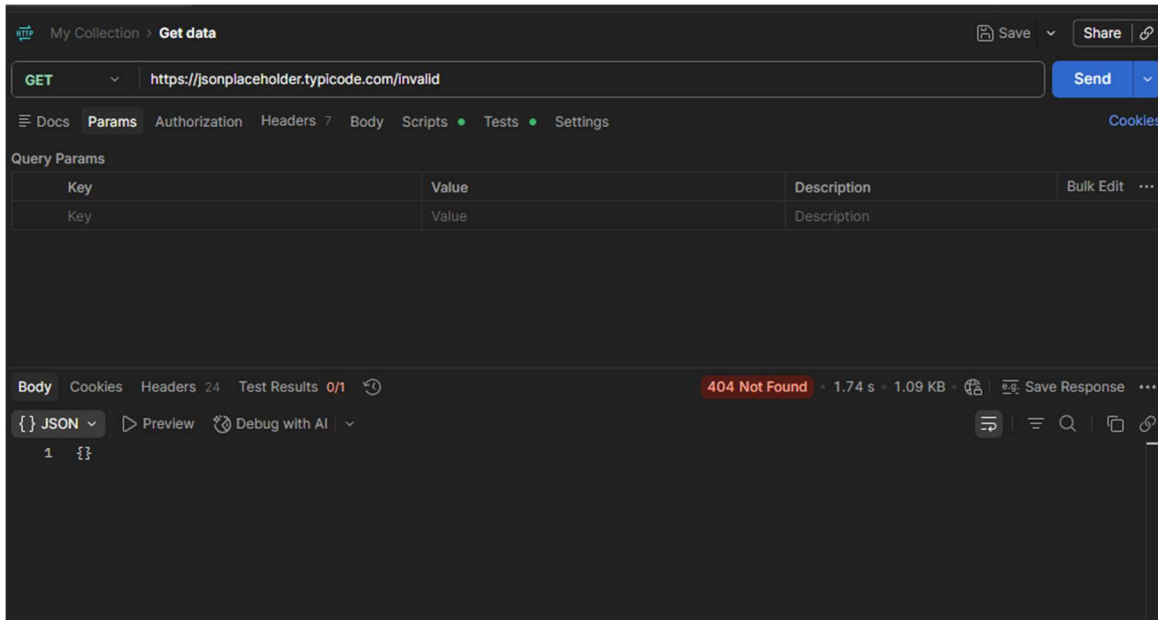

<https://jsonplaceholder.typicode.com/invalid>

HTTP Method: GET

Status Code: 404 Not Found

Reason:

The requested endpoint does not exist on the server, so the server returns a 404 Not Found response.

Conclusion

This task helped me learn how to use Postman to send GET requests, inspect JSON responses, understand request and response headers, and identify HTTP status codes such as 200 OK and 404 Not Found.
