

NAME: SANIA SOHAIL

INTERN AT: Petalnex Pvt. Ltd.

INTERNSHIP DOMAIN: AI AUTOMATION

Day 13 — Generative AI & LLM Fundamentals

Groq API Test

Objective

Set up and verify Groq model access through Postman.

API Setup

Provider: Groq

API key: Generated successfully. The key is private and must be redacted in screenshots.

Authentication: Bearer Token

Test endpoint: <https://api.groq.com/openai/v1/chat/completions>

Sample API Test

Test prompt: “Explain how AI works in a few words.”

Result: 200 OK — successful test call.

Screenshot

The screenshot displays a REST client interface with a POST request to `https://api.groq.com/openai/v1/chat/completions`. The request body is raw JSON, specifying the model as `llama-3.3-70b-versatile` and a user message: `"Hello, explain AI in one sentence."`. The response is a 200 OK status with a 621 ms latency and 1.49 KB of data. The response body is shown in JSON format, containing an ID, object type, creation time, model name, and a single choice with the generated message.

```
1 {
2   "model": "llama-3.3-70b-versatile",
3   "messages": [
4     {
5       "role": "user",
6       "content": "Hello, explain AI in one sentence."
7     }
8   ]
9 }
```

Body Cookies 1 Headers 20 Test Results 200 OK • 621 ms • 1.49 KB

```
1 {
2   "id": "chatcmpl-96c5a2f8-74c2-46ca-8613-f111d201d8d8",
3   "object": "chat.completion",
4   "created": 1786341830,
5   "model": "llama-3.3-70b-versatile",
6   "choices": [
7     {
8       "index": 0,
9       "message": {
```

Provider Comparison Note

For classification, I would use Groq when fast responses are important, especially in automation workflows where many inputs need to be processed quickly. For example, it can classify leads into High, Medium, or Low priority. For long-context work, I would first check the context limit of the selected Groq model and choose it only when that limit is enough for the task. Overall, Groq is a good choice when speed and low-latency inference are priorities.
